Green Mountain selected as Microsoft Azure ExpressRoute Partner

Green Mountain, operator of some of the world's greenest data centers, has announced it has been selected as a Microsoft Azure ExpressRoute partner connecting in Stavanger. "This enables our clients to extend their on-premises networks into the Microsoft Azure cloud over a private connection," says CEO, Tor Kristian Gyland.

Azure ExpressRoute connections bypass the public Internet and offer more reliability, faster speeds, predictable latencies and data privacy. "For latency

sensitive applications this will mean improved performance and user experience.” says CSO, Svein Atle Hagaseth. “Green Mountain is one of the [first data centers in Norway](#) to be operational with this solution. This will greatly benefit all of our current and prospective clients who are utilizing Microsoft Azure cloud services.”

An increasing number of companies deploying a hybrid cloud strategy has driven a need for a private connection between public cloud providers and a company’s data centres – Azure ExpressRoute is an answer to these requirements.

With a fast and reliable connection to Azure this solution is well-suited for high availability scenarios including business continuity replication, periodic data transfer, emergency recovery and so forth. As an Azure ExpressRoute partner Green Mountain can simplify the connection to Azure for Norwegian clients and secure a resilient, high-speed, low-cost connection.

“Inclusion into the Microsoft Azure ExpressRoute program strengthens our position as one of the most connected data centres on the west-coast of Norway and one of the most connected colocations in the Nordic region,” Gyland concludes.

CEO of Green Mountain, Tor Kristian Gyland.

Green Mountain AS design, build and operate high-security, robust wholesale colocation data centres. Green Mountain currently has two operational data centers in Norway, with a third under construction in the Oslo-region. The data centres operate on 100% low cost renewable power and use of free cooling creating unique power efficiency. Green Mountain is one of the most connected data centres in the Nordic region and will be the landing point of the upcoming [NO-UK cable](#). Green Mountain is one of the largest operators in the sector in Norway with clients in finance, IT service providers, Government, Health, O&G and others. Green Mountain AS design build and operate high security, robust wholesale colocation data centres.
